Forest industry operation management

Due to ever-tightening competition and requirements towards ERP systems they have changed to more comprehensive and guiding orientation where more is demanded from the system than managing the mandatory tasks. The sector specific solutions are superseding general ERP systems. Operational management systems are required to offer the information and tools to manage work more efficiently and to help analyze and optimize the supply chain.

Do You know the answer to the following questions?

- . Is Your log distribution what You need it to be?
- . Do You know the exact costs and margin of Your roundwood purchasing?
- . Is Your company prepared for the possible changes in the roundwood purchasing field and do You possess a versatile toolbox to handle timber trade?
- . How much error-prone manual work is done with e.g. Excel that could be handled with a sector specific ERP system?
- . How high are the costs of unsynchronization of sales of production?
- . Do Your customers receive their orders on time?
- . Do You have a harmonized production planning and is the information available for the entire organization?
- . Which products are more profitable as further processed and which should be sold as sawn goods?
- . How high is the financing cost for the inventory error and the inefficiency caused by distorted warehouse information?
- . Could the delivery and forklift efficiency be increased with a graphical warehouse management system?
- . Do You have enough information available from different supply chain phases to support decision making?

WORRY NOT, IF ANSWERING TO THE QUESTIONS CAUSED SOME HEADACHE, WE CAN HELP YOU!
