

Trimble delivers Connected Forest

The Trimble CONNECTED FOREST brings meaning to the flood of information allowing greater connectivity across the organization and real time visibility to the lifecycle of planning, planting, growing, harvesting, transport and processing. Forest companies rely on Trimble to identify what information provides strategic value, access data from many different sources, and leverage Information to gain a competitive advantage.

Visibility to entire supply chain
CONNECTED FOREST is the most comprehensive integrated technology in the industry. Our specialized software and consulting services deliver efficient access and visibility to data and functionality for the entire supply chain: inventory and cruise management, roads, trails and streams, intensive silviculture, stand/block activities, land records, real estate and leasing, harvest scheduling, workforce control, haul logistics, wood procurement, log accounting and mill process diagnostics.

GLOBAL PRESENCE

Trimble Forestry is a vertical of Trimble Inc., a global company established in 1978 and traded on the Nasdaq stock exchange. Trimble has 10 000 employees, with 250 dedicated to forestry software solutions. We are available globally almost every corner of the world. Trimble Forestry has offices and professionals in Australia, Brazil, Canada, Finland, Germany, New Zealand and USA. Over 8 000 users in across the globe rely on Trimble Forestry for business critical business, operations, and asset management solutions.

In 2015 Finland, Trimble acquired the Fifth Element Oy based in Espoo. During 2017 Trimble expanded forestry business operations in Finland with the acquisition Savcor Oy, based in Mikkeli, and Silvadata Oy in Espoo. The three Finnish are now combined into a single entity under the name Trimble Forestry Europe Oy, and our brand is now unified worldwide as Trimble Forestry.
